

## **APPENDIX**

## **8.2. Proposals**

Proposals given in this chapter will be obligatory for both Parties and do not require further approval when the actual Joint Annual Report is approved and signed by Nominated Monitoring Agents.

1. Hungarian experts suggest discussing a slight change of the method for average annual flow rate calculation, which would consider the circumstances that occurred in the hydrological year 2010.
2. Considering the differences in the evaluation of surface water quality according to national methodologies, experts of the Slovak Party propose to discuss and reconsider the evaluation method of surface water quality, which was agreed by both Parties on the meeting of Monitoring Agents on April 25, 2007.
